RT lower limb Doppler US**Report**

The common femoral, superficial femoral and popliteal veins and the small veins of the leg appear normally patent with normal compressibility, flow and augmentation, no signs of DVT seen.
No varicose veins seen

The common femoral, superficial femoral and popliteal arteries and the small arteries of the leg (ant. And post. Tibial and the peroneal arteries) appear normally patent with normal flow pattern, no signs of occlusion or narrowing seen.

Enlarged several lymph nodes in inguinal region largest one measures 8 mm in short axis in inguinal region .

Conclusion

In comparison to previous Doppler study on 19-2-2025 , no evidence of cellulitis seen apart from enlarged lymph nodes in inguinal region.

Regards,

Radiologist: Dr.Ibrahim Chawshly
